

Syapse provides clinical intelligence and real-world insights to health systems to help them grow and scale precision medicine programs

syapse Executive

Leaders can identify areas for program growth and benchmark progress against the Syapse Learning Health Network

- Monitor molecular testing trends
- Ensure adherence to standard-of-care testing practices
- Quantify precision medicine program impact
- Understand clinical data quality at your health system to drive improvement

syapse Insights

Researchers can build intelligence about the oncology population to optimize the clinical trial portfolio and benefit from our life sciences partnerships

Includes Syapse Executive, plus:

- Increase clinical trial access by leveraging data and life sciences partnerships
- Assess feasibility for opening potential new trials
- Identify patients to receive newly approved treatments
- Publish on real-world outcomes data from the Syapse Learning Health Network

syapse Oncology

Clinical care teams can incorporate integrated patient data and real-world evidence into workflows and leverage data for clinical decision support

Includes Syapse Executive and Syapse Insights, plus:

- Simplify molecular tumor board case prep and review
- View standardized molecular test results across disparate labs
- Identify new targeted therapy options for patients
- Refer previously unidentified patients to genetic counseling
